

## Save Time in Packaging Prepress

### Inspect, trap and process artwork within ADOBE ILLUSTRATOR Software

Complex packaging designs require expert handling in prepress in order to optimize efficiency in the pressroom, and to meet brand owner requirements for quality and consistency. KODAK PRINERGY Tools enables prepress providers to work directly within ILLUSTRATOR to prepare files for print using a powerful suite of capabilities designed specifically for packaging artwork. By correcting and refining files as they enter the production workflow, PRINERGY Tools accelerates cycle times and helps ensure high-quality output.

#### Improve efficiency

By enabling prepress corrections to be made to native artwork, PRINERGY Tools eliminates the need for prepress operators to correct packaging files in both PDF and ILLUSTRATOR, saving time and streamlining file preparation.

#### Improve accuracy

Identify and correct problems early, before they become costly problems on press.

#### Improve quality

Ensure complex packaging files containing blends and transparencies are properly prepared from the start, and benefit from unique packaging tools for automating trapping and other prepress operations that make it one-click easy to optimize final results.

#### Leverage open integration

Efficiently prepare files for any type of production process and output to a wide variety of devices, including flexo and offset platesetters, or digital presses.

The PRINERGY Tools interactive trapper places your artwork traps in color pairs. This makes identifying and editing traps a breeze.

Selecting and editing your traps has never been easier.

Vector-based trapping in PRINERGY Tools is placed on a separate trapping layer.

The PRINERGY Tools object screen manager allows users to easily select objects and separations and assign different screening to the artwork.

Creating barcodes is simplified with PRINERGY Tools.
